# Access Reliable Tower Data Through Tower Digital Twins

OpenTower iQ: The first comprehensive Tower Digital Twin Solution

Traditional cell tower management workflows include many responsible parties referencing multiple and disparate data sets through a variety of systems, making change and configuration management nearly impossible. This disconnect can lead to data that is unreliable, impeding efficiencies and making critical decisions more difficult.

OpenTower iQ, Bentley Systems' tower digital twin solution, acts as the single source of truth, enabling tower owners and operators to:

- **Increase tower tenancy**
- **Improve service levels**
- **Accelerate project delivery**
- **Reduce OPEX costs**
- **Make data-driven decisions**

OpenTower.com
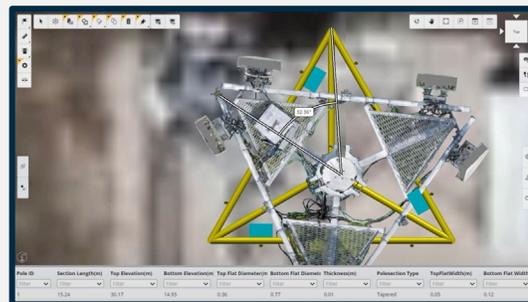

One Source of Truth from Capture to Approvals

Through the combination of available legacy data, photogrammetry and innovative artificial intelligence, a digital twin can be quickly created within OpenTower iQ. Once visualized, the immersive 4D graphical experience can be leveraged to conduct and automate every necessary step across the tower management lifecycle.
